

Boundedness

- A function f is **bounded below** if there is some number b that is less than or equal to every number in the range of f . Any such number b is called a lower bound of f .
- A function f is **bounded above** if there is some number b that is greater than or equal to every number in the range of f . Any such number is called an upper bound of f .
- A function is **bounded** if it is bounded both above *and* below.

Not bounded above.
Not bounded below.

Not bounded above.
Bounded below.

Bounded above.
Not bounded below.

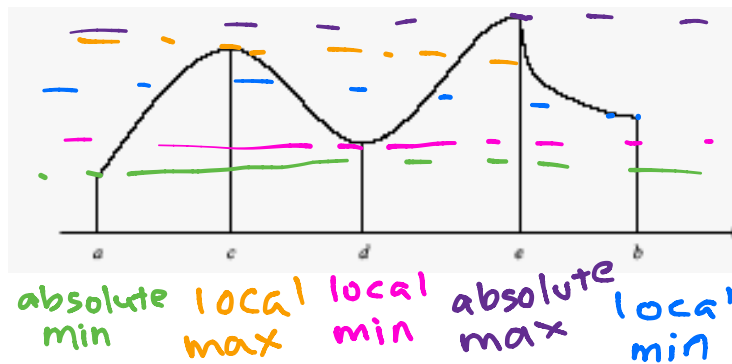

Bounded above.
Bounded below.

Local and Absolute Extrema

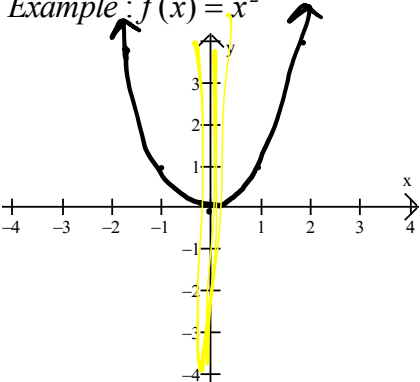

- Extrema:
- peak (max) or a valley (min);
 - when a function changes from increasing to decreasing or from decreasing to increasing
- Local extrema:
- relative max or min
 - peak or valley but not the highest/lowest point
- Absolute extrema:
- the highest or lowest point on a function

Example 4: Identify whether the function above has a local or absolute extrema at each of the points a - e .

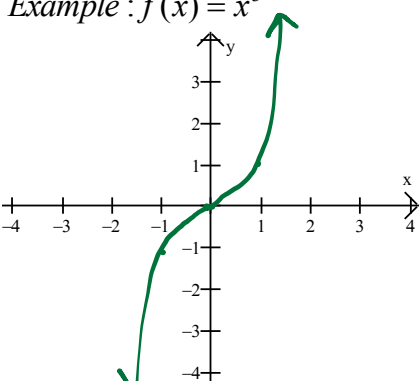

Symmetry:

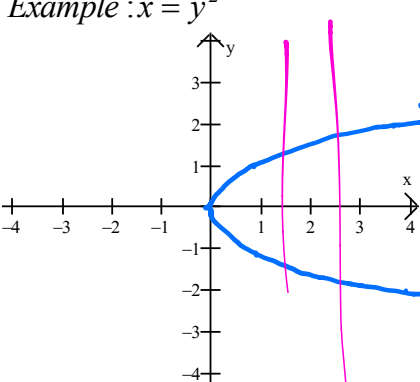

Symmetric with respect to the y-axis - Even Function

Graphically	Numerically	Algebraically														
<p>Example: $f(x) = x^2$</p> 	<table border="1"><thead><tr><th>x</th><th>f(x)</th></tr></thead><tbody><tr><td>-3</td><td>9</td></tr><tr><td>-2</td><td>4</td></tr><tr><td>-1</td><td>1</td></tr><tr><td>1</td><td>1</td></tr><tr><td>2</td><td>4</td></tr><tr><td>3</td><td>9</td></tr></tbody></table>	x	f(x)	-3	9	-2	4	-1	1	1	1	2	4	3	9	$\frac{f(-x) = f(x)}{f(x) = x^2}$ $f(-x) = (-x)^2 = x^2$
x	f(x)															
-3	9															
-2	4															
-1	1															
1	1															
2	4															
3	9															

Symmetric with respect to the origin - Odd Function

Graphically	Numerically	Algebraically														
<p>Example: $f(x) = x^3$</p> 	<table border="1"><thead><tr><th>x</th><th>f(x)</th></tr></thead><tbody><tr><td>-3</td><td>-27</td></tr><tr><td>-2</td><td>-8</td></tr><tr><td>-1</td><td>-1</td></tr><tr><td>1</td><td>1</td></tr><tr><td>2</td><td>8</td></tr><tr><td>3</td><td>27</td></tr></tbody></table>	x	f(x)	-3	-27	-2	-8	-1	-1	1	1	2	8	3	27	$\frac{f(-x) = -f(x)}{f(x) = x^3}$ $f(-x) = (-x)^3 = -x^3$
x	f(x)															
-3	-27															
-2	-8															
-1	-1															
1	1															
2	8															
3	27															

Symmetric with respect to the x-axis - Not a Function

Graphically	Numerically	Algebraically														
<p>Example: $x = y^2$</p> 	<table border="1"><thead><tr><th>x</th><th>f(x)</th></tr></thead><tbody><tr><td>9</td><td>3</td></tr><tr><td>4</td><td>2</td></tr><tr><td>1</td><td>1</td></tr><tr><td>1</td><td>-1</td></tr><tr><td>4</td><td>-2</td></tr><tr><td>9</td><td>-3</td></tr></tbody></table>	x	f(x)	9	3	4	2	1	1	1	-1	4	-2	9	-3	<p>These graphs are not functions but they do have the following relation:</p> <p><u>$(x, -y)$ is on the graph whenever (x, y)</u></p>
x	f(x)															
9	3															
4	2															
1	1															
1	-1															
4	-2															
9	-3															

Asymptotes

Horizontal Asymptote: $y = b$ is a horizontal asymptote if and only if

$$\lim_{x \rightarrow \pm\infty} f(x) = b$$

Vertical Asymptote: $x = a$ is a vertical asymptote on $f(x)$ if and only if

$$\lim_{x \rightarrow a^+} f(x) = \pm\infty \quad \text{or} \quad \lim_{x \rightarrow a^-} f(x) = \pm\infty$$

Example 5: Identify any asymptotes on the graphs below.

a) $f(x) = \frac{1}{x}$

$\lim_{x \rightarrow \infty} f(x) = 0$
 $\lim_{x \rightarrow -\infty} f(x) = 0$
 H.A. $a + y = 0$
 $\lim_{x \rightarrow 0^-} f(x) = -\infty$
 $\lim_{x \rightarrow 0^+} f(x) = \infty$
 V.A. $a + x = 0$

b) $f(x) = \frac{2x^2}{4-x^2}$

$\lim_{x \rightarrow -2^-} f(x) = -\infty$
 $\lim_{x \rightarrow -2^+} f(x) = \infty$
 V.A. $a + x = -2$
 H.A. $a + y = 2$
 V.A. $a + x = 2$

Limit notation:

$$\lim_{x \rightarrow a} f(x)$$

"Limit as x goes to a"

$$\lim_{x \rightarrow a^+} f(x)$$

"Limit as x goes to a from the positive side"

$$\lim_{x \rightarrow a^-} f(x)$$

"Limit as x goes to a from the negative side"

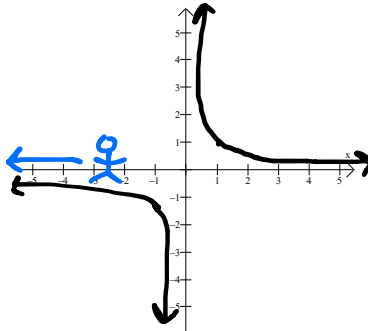

Limits to Infinity

Example 6: Find the limits graphically.

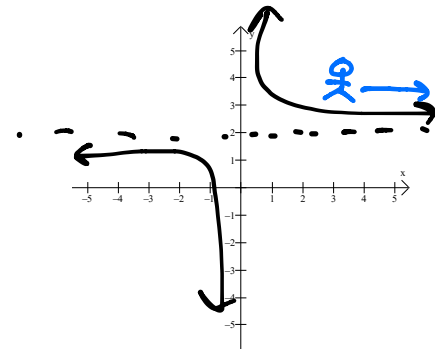

a) $\lim_{x \rightarrow \infty} x^2 - 3 = +\infty$

b) $\lim_{x \rightarrow -\infty} \frac{1}{x} = 0$

c) $\lim_{x \rightarrow \infty} \frac{1}{x} + 2 = 2$

End Behavior

Right hand end behavior: $\lim_{x \rightarrow +\infty} f(x)$

Left hand end behavior: $\lim_{x \rightarrow -\infty} f(x)$

Example 7: Describe the end behavior of the graph below.

$$\lim_{x \rightarrow \infty} f(x) = \infty$$

$$\lim_{x \rightarrow -\infty} f(x) = \infty$$

Example 6: Describe the behavior of the graph below:

a) $f(x) = \frac{1}{2}x^3 + 2x - 1$

b) $f(x) = \frac{4x^2}{1+2x^2}$

Domain: $(-\infty, \infty)$

Range: $(-\infty, \infty)$

Continuity: continuous

Increasing/Decreasing: increasing: $(-\infty, -2.3) \cup (0, \infty)$
decreasing: $(-2.3, 0)$

Symmetry: None

Boundedness: not bounded

Extrema: local max: 2.3 when $x = -2.3$
local min: -1 when $x = 0$

Asymptotes: None

End Behavior:

$$\lim_{x \rightarrow \infty} f(x) = \infty$$

$$\lim_{x \rightarrow -\infty} f(x) = -\infty$$

Domain: $(-\infty, \infty)$

Range: $[0, 2)$

Continuity: continuous

Increasing/Decreasing: increasing: $(0, \infty)$
decreasing: $(-\infty, 0)$

Symmetry: about the y-axis

Boundedness: bounded

Extrema: absolute min: 0 when $x = 0$.

Asymptotes: $y = 2$

End Behavior:

$$\lim_{x \rightarrow \infty} f(x) = 2$$

$$\lim_{x \rightarrow -\infty} f(x) = 2$$
