

NOTES: SECONDARY 2H
Unit 9: Solving Trigonometric Equations

Solve the following for the unknown:

<p>1. $2x - 1 = 0$</p> $\frac{2x - 1}{+1 +1} = \frac{1}{2}$ $\frac{2x}{2} = \frac{1}{2}$ <p>$x = \frac{1}{2}$</p>	<p>2. $4x^2 - 3 = 0$</p> $\frac{4x^2 - 3}{+3 -3} = \frac{3}{4}$ $\sqrt{4x^2} = \sqrt{3}$ $x = \pm \frac{\sqrt{3}}{2}$	<p>3. $9x^2 - 25 = 0$</p> $(3x - 5)(3x + 5) = 0$ $3x - 5 = 0 \quad 3x + 5 = 0$ $x = \frac{5}{3} \quad x = -\frac{5}{3}$
<p>4. $2x^2 + 5x - 12 = 0$</p> $(2x - 3)(x + 4) = 0$ $2x - 3 = 0 \quad x + 4 = 0$ $x = \frac{3}{2} \quad x = -4$	<p>5. $\sin 30^\circ = x$</p> $x = \frac{1}{2}$	<p>6. $\sin 150^\circ = x$</p>  $\sin 30^\circ = \frac{1}{2}$

Question:

- How many answers do you have to the problem $\sin \theta = \frac{1}{2}$?

infinite

- How many answers would you have if I restricted your solutions to $0^\circ \leq \theta \leq 360^\circ$?

Two solutions (30° & 150°)

When solving trigonometric equations, there a couple of steps we can follow.

STEP #1: Solve for the trigonometric equation. (So the only term on one side of the equal sign is a trigonometric function and everything else is on the other side.)

STEP #2: Determine what two quadrants your solution will fall in. (Between $0^\circ \leq \theta \leq 360^\circ$, there will always be two quadrants.)

STEP #3: Solve for your reference angle using the table of the 9 basic trig functions.

STEP #4: Using the reference angle in #3 and the quadrants in #2, write your final solution.

Remember, your answer should be a positive angle between 0° and 360° .

Example 1: Find the values of x if $0^\circ \leq x \leq 360^\circ$.

a. $2 \sin x - 1 = 0$

$$\frac{2 \sin x - 1}{+1 +1} = \frac{1}{2}$$

$$\frac{2 \sin x}{2} = \frac{1}{2}$$

$$\sin x = \frac{1}{2}$$

$x = 30^\circ, 150^\circ$

b. $\sin x + \sqrt{2} = -\sin x$

$$\frac{\sin x + \sqrt{2}}{+\sin x - \sqrt{2}} = \frac{-\sin x - \sqrt{2}}{+\sin x - \sqrt{2}}$$

$$\frac{2 \sin x}{2} = \frac{-\sqrt{2}}{2}$$

$$\sin x = -\frac{\sqrt{2}}{2}$$

$x = 225^\circ, 315^\circ$

c. $2 \tan x + 2\sqrt{3} = 0$

$$\frac{2 \tan x + 2\sqrt{3}}{-2\sqrt{3} - 2\sqrt{3}} = \frac{-2\sqrt{3}}{2}$$

$$\frac{2 \tan x}{2} = \frac{-2\sqrt{3}}{2}$$

$$\tan x = -\sqrt{3}$$

$x = 120^\circ, 300^\circ$

d. $2 \cos x + \sqrt{3} = 0$

$$\frac{2 \cos x + \sqrt{3}}{-\sqrt{3} - \sqrt{3}} = \frac{-\sqrt{3}}{2}$$

$$\frac{2 \cos x}{2} = \frac{-\sqrt{3}}{2}$$

$$\cos x = -\frac{\sqrt{3}}{2}$$

$x = 150^\circ, 210^\circ$

Sometimes, we need to factor before we can solve.

Example 2: Find the values of θ if $0^\circ \leq \theta \leq 360^\circ$.

a. $\cos \theta - \cos \theta \sin \theta = 0$

$\cos \theta (1 - \sin \theta) = 0$

$\cos \theta = 0$

$1 - \sin \theta = 0$

$\sin \theta = 1$

$\theta = 90^\circ$

$\theta = 90^\circ, 270^\circ$

b. $\sin^2 \theta - 2 \sin \theta = 0$

$\sin \theta (\sin \theta - 2) = 0$

$\sin \theta = 0$

$\sin \theta - 2 = 0$

$\sin \theta = 2$

$\theta = 0^\circ, 180^\circ, 360^\circ$

c. $2 \sin^2 \theta + \sin \theta = 1$

$2 \sin^2 \theta + \sin \theta - 1 = 0$

$2u^2 + u - 1 = 0$

$(2u - 1)(u + 1) = 0$

$\begin{array}{r} +2u \\ -1u \\ \hline \end{array}$

$2u - 1 = 0$

$u + 1 = 0$

$u = \frac{1}{2}$

$u = -1$

$\sin \theta = \frac{1}{2}$

$\sin \theta = -1$

$\theta = 30^\circ, 150^\circ, 270^\circ$

$u = \sin \theta$

d. $2 \cos^2 x + \cos x - 1 = 0$

$u = \cos x$

$2u^2 + u - 1 = 0$

$(2u - 1)(u + 1) = 0$

$u = \frac{1}{2}$

$u = -1$

$\cos x = \frac{1}{2}$

$\cos x = -1$

$x = 60^\circ, 300^\circ, 180^\circ$

$x = 60^\circ, 180^\circ, 300^\circ$

CHALLENGE PROBLEMS:

a. $\frac{\cos^3 x}{\sin x} = \cot x$

b. $2 \sin^2 x - 3 \cos x = 0$

$2(1 - \cos^2 x) - 3 \cos x = 0$

$2 - 2 \cos^2 x - 3 \cos x = 0$

$u = \cos x$

$-2 \cos^2 x - 3 \cos x + 2 = 0$

$+2u^2 + 3u + 2 = 0$

$2u^2 + 3u - 2 = 0$

$(2u - 1)(u + 2) = 0$

$\begin{array}{r} +4u \\ -1u \\ \hline \end{array}$

$2u - 1 = 0$

$u = \frac{1}{2}$

$\cos x = \frac{1}{2}$

$u + 2 = 0$

$u = -2$

~~$\cos x = -2$~~

$x = 60^\circ, 300^\circ$
