

Determine which quadrant....

|   |  |
|---|--|
| 1. What quadrant(s) is tangent negative?                  | 2. What quadrant(s) is cosine positive?    |
| 3. What quadrant(s) is sine positive and cosine negative? | 4. What quadrant does $350^\circ$ fall in? |
| 5. What quadrant does $-268^\circ$ fall in?               | 6. What quadrant does $154^\circ$ fall in? |
| 7. What quadrant does $-400^\circ$ fall in?               | 8. What quadrant does $634^\circ$ fall in? |

Determine the exact value of each expression without using a calculator.

|                         |                         |                          |
|-------------------------|-------------------------|--------------------------|
| 9. $\sin(90^\circ) =$   | 10. $\cos(240^\circ) =$ | 11. $\tan(-315^\circ) =$ |
| 12. $\cot(180^\circ) =$ | 13. $\sec(150^\circ) =$ | 14. $\csc(270^\circ) =$  |
| 15. $\sin(225^\circ) =$ | 16. $\cos(300^\circ) =$ | 17. $\tan(450^\circ) =$  |

Find the unknown angle if  $0^\circ \leq \theta < 90^\circ$

|  |  |                              |
|--|--|------------------------------|
| 18. $\sin \theta = \frac{\sqrt{3}}{2}$ | 19. $\cos \theta = \frac{\sqrt{2}}{2}$ | 20. $\tan \theta = \sqrt{3}$ |
| 21. $\cos \theta = \frac{\sqrt{3}}{2}$ | 22. $\sin \theta = \frac{1}{2}$        | 23. $\tan \theta = 1$        |

Find a positive and negative coterminal angle of the given angle.

|                 |                  |
|-----------------|------------------|
| 24. $500^\circ$ | 25. $-480^\circ$ |
|-----------------|------------------|

Determine the reference angle of the following angles.

|                 |                  |
|-----------------|------------------|
| 26. $267^\circ$ | 27. $-147^\circ$ |
|-----------------|------------------|

Simplify each expression.

|   |   |
|---|---|
| 28. $(1 - \sin \theta)(1 + \sin \theta)$        | 29. $(\cos x - \sin x)^2 + (\cos x + \sin x)^2$   |
| 30. $\frac{\tan \theta}{\sin \theta}$           | 31. $\sin y + \sin y \cot^2 y$                    |
| 32. $\frac{\sin^2 x}{\cos^2 x} + \sec x \cos x$ | 33. $\tan x + \cot x$                             |
| 34. $\cos(-x) \sin x \csc(-x)$                  | 35. $\sin^2 x (1 + \cot^2 x)$                     |
| 36. $\cot(-x) \sin(-x)$                         | 37. $\frac{\sec \theta \tan \theta}{\csc \theta}$ |
| 38. $\frac{\sin 65}{\cos 25}$                   | 39. $\frac{1 - \sin^2 \theta}{\cos(-\theta)}$     |

Verify the following trig identities.

|   |   |
|---|---|
| 40. $\cos(\theta - 90^\circ) = \cos \theta \tan \theta$   | 41. $1 + \sec x \sin x \tan x = \sec^2 x$                 |
| 42. $\tan x \cos x + \csc x \sin^2 x = 2 \sin x$  | 43. $\frac{\cos^2 y + \tan^2 y + \sin^2 y}{\cos^2 y} = 1$ |
| 44. $\frac{\sin \theta}{1 - \sin \theta} + \frac{\sin \theta}{1 + \sin \theta} = 2 \tan \theta \sec \theta$ | 45. $\sec x (\sec x - \cos x) = \tan^2 x$                 |
| 46. $\sec y + \tan y = \frac{\cos y}{1 - \sin y}$   |   |

Solve each equation for  $0^\circ \leq \theta < 360^\circ$

|   |                                    |
|---|------------------------------------|
| 47. $2 \cos x + 1 = 0$                    | 48. $2 \sin \theta + \sqrt{3} = 0$ |
| 49. $2 \sin^2 \theta + 1 = 3 \sin \theta$ | 50. $3 \sin \theta = 5$            |

Use the angle sum or difference identity to find the exact value of each. (NO CALCULATOR)

|                      |                      |
|----------------------|----------------------|
| 51. $\sin 15^\circ$  | 52. $\cos 75^\circ$  |
| 53. $\sin 165^\circ$ | 54. $\tan 105^\circ$ |

Use the angle sum or difference identities to simplify the expression. (NO CALCULATOR)

|   |   |
|---|---|
| 55. $\sin 90^\circ \sin 60^\circ - \cos 90^\circ \cos 60^\circ$ | 56. $\sin 23^\circ \cos 15^\circ + \sin 15^\circ \cos 23^\circ$ |
| 57. $\cos(270^\circ - \theta)$                                  | 58. $\sin(180^\circ - \theta)$                                  |

CALCULATOR PORTION:

59. Find  $\sin A$ ,  $\cos A$ , and  $\tan A$ . Round to the nearest thousandth.

60. A right triangle has a side length of  $a = 8$  and  $b = 4$ . Find the angle measurements and the length of the hypotenuse. Then, find the sine, cosine, and tangent for angles A and B (across from sides a and b, respectively).

61. A right triangle has a side length of  $a = 4$  and a hypotenuse of 8. Find the angle measurements of A and B. Then, find the sine, cosine, and tangent for both angles.

63. A monument is 75 meters high. At an information booth, an observer notices the angle of elevation to the top of the monument is  $36^\circ$ . How far is the observer from the base of the building?

64. A bluebird on a 30-meter-tall flagpole spots a worm on the ground below. The angle of depression from the bluebird to the worm is  $25^\circ$ . How far away from the base of the flagpole is the worm?

BONUS QUESTION: If  $0^\circ < \theta < 90^\circ$  and  $\sin \theta = \frac{2}{9}$ , find  $\cos \theta$  using a Pythagorean identity.
